Fireworks should not be set off near horses or livestock, as it causes them to react, leading from minor to fatal injuries.

It's not just horses or livestock that are affected by sudden and loud noises - Think of your neighbourhood and domestic pets.

Reduce the noise and light levels - Consider quiet fireworks.

Environmental impact - Fireworks cause extensive air pollution in a short amount of time, plus debris can be spread in the local area.

Warn others in advance that you are considering setting off fireworks - whether it is for Bonfire Night, Birthdays or other celebrations.

Organised public displays are often safer to attend, so everyone can enjoy the one evening together.

Risks are high, staying safe is key. Thousands of people suffer from firework related injuries each year.

Keep your distance, if horses or livestock are located close by please consider alternative locations.

Stray fireworks, sparklers or sky lanterns could cause serious damage to stables, barns or even your property.

Think about horses, livestock and domestic pets when making plans to set off fireworks and inform your local community so they can be prepared.
